

Needs rules for TAR
Different rule found when using fish vs bash/zsh
If you become a Christian, what will you name this?
Alias for nushell
Instructions for use in a corporate environment
Color spills in windows terminal
needs python distutils package during installation
sqlite3.OperationalError: unable to open database file
Support for Makefile fucks
fuck gets killed immediately
what to delete to reset/clear/remove "profile"
fuck takes about 10s to show corrected commands, annoying. why fuck so slow?
ubuntu18, pip3 install
Command Format
sudo.py assumes && for shell 'and'
no_command rule doesn't work properly with executables that have an uppercase name
The Fuck Does not Respect Aliases in Shell
EOL (end of line) issue on windows
Feature Request: rvm
Commands with variable definition are not matched by most rules
Working fine, but will automatically open ".zshrc" file every time
Do --alias faster (ideally ~50% faster, maybe)
Feature Request: Correct me when I type figlet moo | cowsay
running fuck after successful apt update errors after several seconds
first suggestions show vim /bin/sh +1 && in front
[SUGGESTION] Write to stdin instead of using the confirmation prompt
