

Native support for StridedSlice in 6D and Transpose in 7D

The GRU/LSTM function bugs when using TF2.7

Why is tensorflow2.6 so much slower than pytorch1.10.0+cu113?

ValueError: Exception encountered when calling layer "transformer_decoder_3" (type TransformerDecoder). Could not find matching concrete function to call loaded from the SavedModel

Tensorflow Docker 2.7.0-gpu has incompatible TRT version 8.0.0

TensorBoard doesn't work on IOS/IpadOS. Requires apple icons.

Will experimental_distribute_dataset or

experimental_distribute_datasets_from_function distribute same data in more than one batch ?

NNAPI/Hexagon Support Through CMAKE on RB5 Arm Linux Platform

Training time is varying between docker and without docker

LocallyConnected layers default initializer glorot_uniform determines fanning incorrectly

API generation makes inheritance relationship confusing after r2.6

How to debug xla .

framework not found TensorFlow Lite

tf.data.dataset gather element

NNAPI on android 11 fails with movenet fp16 and int8 tflite models

error executing command crosstool_wrapper_driver_is_not_gcc

Higher validation and test loss and lower accuracy using tf.data.dataset with tfrecords than using numpy

Using tf.device when creating Keras layers does not move layer computation to that device

Compiling tensorflow/core/kernels/bincount_op.cc failed: (Exit 1): clang failed: error executing command

Do we have any way to avoid memory copy in tf.convert_to_tensor ?

When allocate_output 200MB tensor, op kernel will execute twice

Resurrecting Swift bindings / how much of the core C++ API can run on iOS?

OSError: SavedModel file does not exist at: final_model_weights.hdf5/

{saved_model.pbtxt|saved_model.pb}

tf.sparse.split crashes when axis is a tuple

tf.sparse.softmax randomly outputs wrong results!
