How to add pagination in grunt-assemble

Nested if statements causing custom parameters in partials to become repeated/global scope

Passing pages.data to yaml front matter.

Contribution guide link is broken in the project's issue template

partials/layouts collections discard dot namespaces in view keys

app.cwd points to original cwd when passing --cwd

Provide a generated API documentation

[Question] Capture file buffer post render / pre save

TypeError: str.split is not a function when running task with multiple colons

Assemble issue with inline partial used with condition

Node memory leak running assemble

Considering Webpack support?

request: add page and pages/collection variables to the context

Assigning view collection in preLayout results in "Maximum call stack size exceeded"

i18n Support

Partial with custom layout not rendering in to {% body %} - empty buffer?...

feature: "onView" middleware handler

feature: automatic view type detection

feature: new view type "blocks"

Missing docs/plugins and docs/helpers directories

CLI not returning version

Custom helpers could not be accessed directly inside Handlebars template

CLI: rename --file to --assemblefile

new view type: grid
